

ASHISH RAWAT

+91-9041203643 | ar0859811@gmail.com | LinkedIn | GitHub | Abohar, Punjab, India

PROFESSIONAL SUMMARY

Operations and product professional with hands-on experience managing large-scale data workflows, cross-functional coordination, and continuous process improvement. Built two full-featured AI-powered platforms — Sistum Careers and JobFinder Pro — entirely from scratch, covering user research, feature prioritization, freemium monetization design, and iterative delivery. Comfortable bridging the gap between technical execution and business outcomes, with a strong bias toward reliability, data accuracy, and user-first thinking.

EXPERIENCE

PMS Admin — ENTNT

May 2025 – Present | Remote

- Structured and maintained 10,000+ spare-parts records by building vessel profiles in an ERP system using Excel and SQL, establishing a reliable foundation for preventive maintenance scheduling.
- Achieved 98%+ data-accuracy in spare-parts mapping within the Task Assistant PMS tool by proactively identifying data gaps and enforcing consistency standards across records.
- Acted as the operational link between ship and shore teams, resolving 50+ data-change requests per month and proposing systemic database improvements that reduced recurring errors.
- Developed SQL queries and Excel-based reporting templates that cut manual reconciliation effort and improved turnaround time on operational reports.

Operations Analyst Intern — Career Vyas

Oct 2022 – Jun 2023 | Jalandhar, Punjab

- Mapped and analyzed end-to-end process flows to uncover operational bottlenecks, leading to a 30% improvement in overall workflow efficiency.
- Contributed to 35+ cross-functional brainstorming sessions, synthesizing data into actionable reports and strengthening stakeholder communication practices.

PROJECTS

Sistum Careers — AI-Powered Career Management Platform

Product Builder

React | Node.js | Claude AI | Gemini API | Cloudflare Workers | OpenRouter

- Identified a genuine gap in personalized career-prep tools for Indian students; independently took the product from user research and wireframes all the way to a live, working platform.
- Shipped core features including an AI-generated personalized syllabus, adaptive quiz engine, daily study planner, progress heatmap, streak and XP gamification, and a multilingual interface (EN / HI / PA / TA / TE).
- Designed a 3-tier freemium business model (Free -> Pro Rs.99/3 mo -> Ultra Pro Rs.999/yr) with feature gating, premium UI themes, and priority AI access to drive sustainable monetization.
- Engineered a 3-layer AI fallback system (Cloudflare Workers -> Gemini -> OpenRouter) that ensures near-zero downtime; iterated through 50+ user feedback cycles to continuously sharpen the experience.
- Roadmapped future features: peer study groups, national leaderboard, WhatsApp/Telegram reminder bot, and a mock-test platform for government competitive exams.

JobFinder Pro — AI-Powered Job Search Platform

Product Builder

React | Node.js | Claude AI | REST APIs (JSearch, Adzuna, Remotive, SerpApi, Jooble + 8 more) | Cloudflare Workers

- Conceived and built a full-stack platform combining job aggregation, resume parsing, profile management, and AI-based job matching — purpose-built to simplify job search for the Indian market.
- Integrated 13+ job APIs with India-first geographic targeting across Bengaluru, Hyderabad, Pune, Mumbai, Delhi NCR, Gurugram, Noida, and Chennai.
- Built a custom Web Scout engine that generates targeted search queries, calls real web-search APIs (Serper, Brave, Tavily), and returns only verified URLs from Naukri, LinkedIn Jobs, Wellfound, Internshala, and company career pages — eliminating hallucinated job links entirely.

- Implemented resume-upload auto-fill that parses CVs and populates profile fields (name, email, phone, experience, education, skills) via a robust multi-layer extraction pipeline.
- Designed reliability features including fresher-aware seniority filters, provider-level fault isolation with rate-limit cooldowns, parallel query execution, and fallback job sets to ensure near-zero empty-result screens.

Technical Management System (TMS) — Data Operations

Excel | SQL | ERP Systems

- Led end-to-end data operations for 5,000+ spare-parts records; defined data standards and validation rules that cut manual effort by 30% and improved maintenance-schedule reliability.
- Handled change requests from ship teams in real time, maintaining ERP accuracy and enabling dependable preventive-maintenance workflows.

SKILLS

Operations:	Process Improvement, Cross-functional Coordination, ERP Management, Data Change Management, Data Validation
Product:	Product Thinking, Feature Prioritization, User Research, Freemium Monetization, AI Integration, Prompt Engineering
Tools:	Excel (Advanced), SQL (SSMS MySQL), Power BI, REST API Integration, Cloudflare Workers

EDUCATION

Dr. B.R. Ambedkar National Institute of Technology, Jalandhar

Jun 2021 – Jun 2025

B.Tech in Chemical Engineering

LEADERSHIP & ACHIEVEMENTS

Head — Dramatics Club, NIT Jalandhar

Jun 2024 – Jun 2025

- Directed a 50-member team across multiple theatrical productions; managed end-to-end event logistics, sponsorship negotiations, and budget planning — building leadership and stakeholder management skills directly transferable to cross-functional ops and product roles.

Certifications: SQL 50 Badge — LeetCode | SQL (Intermediate) Certification — HackerRank
